《线性电路实验》预习报告

实验名称:	运算	运算放大器设计		指导教师:		王东雷	df4	df4dac@sina.com		
姓名:_丁蒙	<u> </u>	2023K800990	08031	班级/	₩: _	2308/电子位	言息_	分组序号:	2-06	
实验日期:	2025.05.16	实验地点:	教学核	娄 607	是否认	凋课/补课:	否	成绩:		

1 实验目的

- (1) 进行电路设计,加深对差分放大器、电流源、射随器、负反馈及稳定性等理论知识的理解;
- (2) 加深对运放原理、参数的理解;
- (3) 理解正弦波振荡器振荡条件,加深对负反馈放大器稳定性的理解;
- (4) 理解文氏桥 (Wien-Bridge) 的选频特性,利用设计的运放搭建文氏振荡器。

2 实验仪器

- (1) 数字万用表: Unit UT61E (C190241394)
- (2) 数字示波器: RIGOL 200MSO2202A (DS2F192200361)
- (3) 信号发生器: GWINSTEK AFG-22225 (GER910370)
- (4) 数字直流电源: GWINSTEK GPD-3303S (GES813705)
- (5) 多功能数字测量仪: Analog Discovery 1 (D704387)
- (6) 运放基本参数测试板: Basic Op Amp Measurement Board v2
- (7) 其它:面包板,电容、电阻、二极管、排针、导线等

3 Op Amp using Discrete Transistors

3.1 CMOS Op Amp 1 (Common-Source Output Stage)

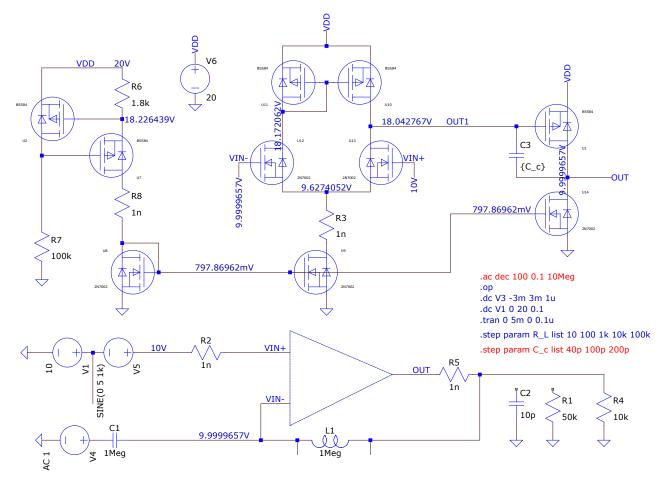

Figure 1: Circuit schematic of CMOS Op Amp 1 (Common-Source Output Stage)

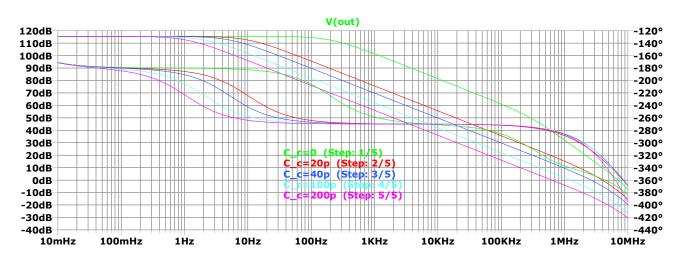

Figure 2: Simulated frequency response of the CMOS op amp 1

3.2 CMOS Op Amp 2 (Improved Push-Pull Output Stage)

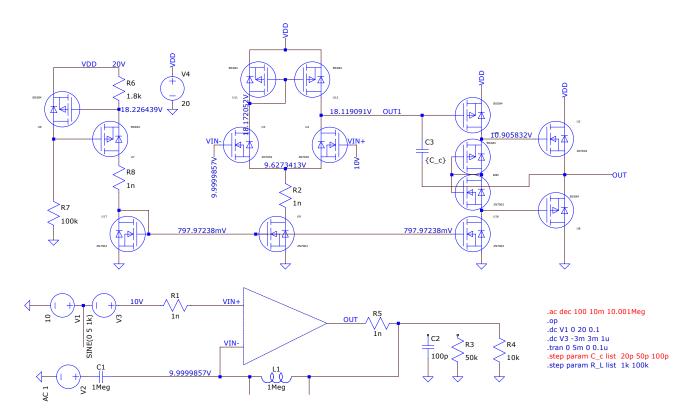

Figure 3: Circuit schematic of CMOS Op Amp 2 (Improved Push-Pull Output Stage)

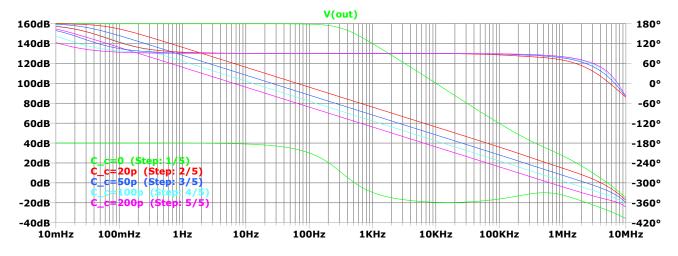

Figure 4: Simulated frequency response of the CMOS op amp 2

3.3 µA741 using Discrete BJTs

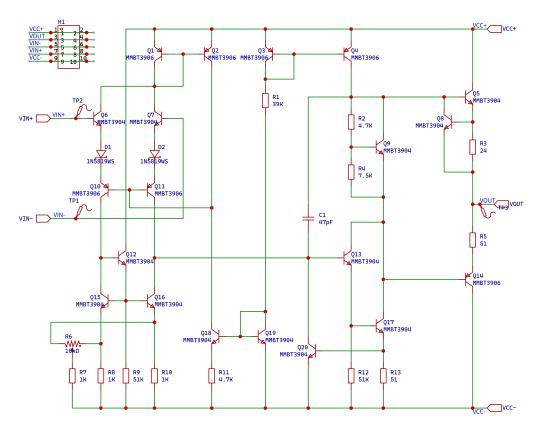

Figure 5: Circuit schematic of the discrete μ A741

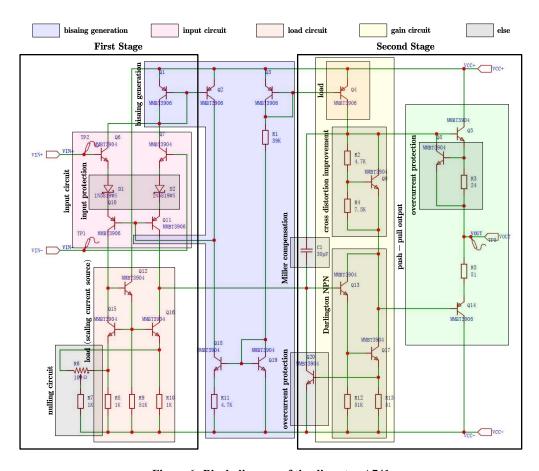

Figure 6: Block diagram of the discrete $\mu A741$
